

# What are the name servers for our website-hosting plans?

The nameservers for our website hosting plans are below. Upon changing them, the domain can take 24-48 hours to fully propagate to us.

Do not try to visit your website while the name servers are still changing, this can result in your home network caching old/incorrect DNS data and cause your computer to take longer to resolve this domain name. You may notice this when your computer can't visit the website (Unknown DNS error) but your cell phone can.

NS1: crab.aquatis.host

NS2: fish.aquatis.host

Once your domain fully points to our name servers, you will be greeted with this page on your website.

---

# Welcome

Thank you for choosing [Aquatis LLC](#) to host your website.

**If you are a visitor of this website:**

The website is being setup, please try again later.

**If you are the owner of this website:**

Use the login information you've received in email to setup your website.

if needed, [contact support](#) for additional help.

Using a different registrar? Below are articles from their sites on how to change them.
