How do I find my Minecraft Servers FTP information?

This guide will show you how to access your FTP information for third-party applications like Filezilla.

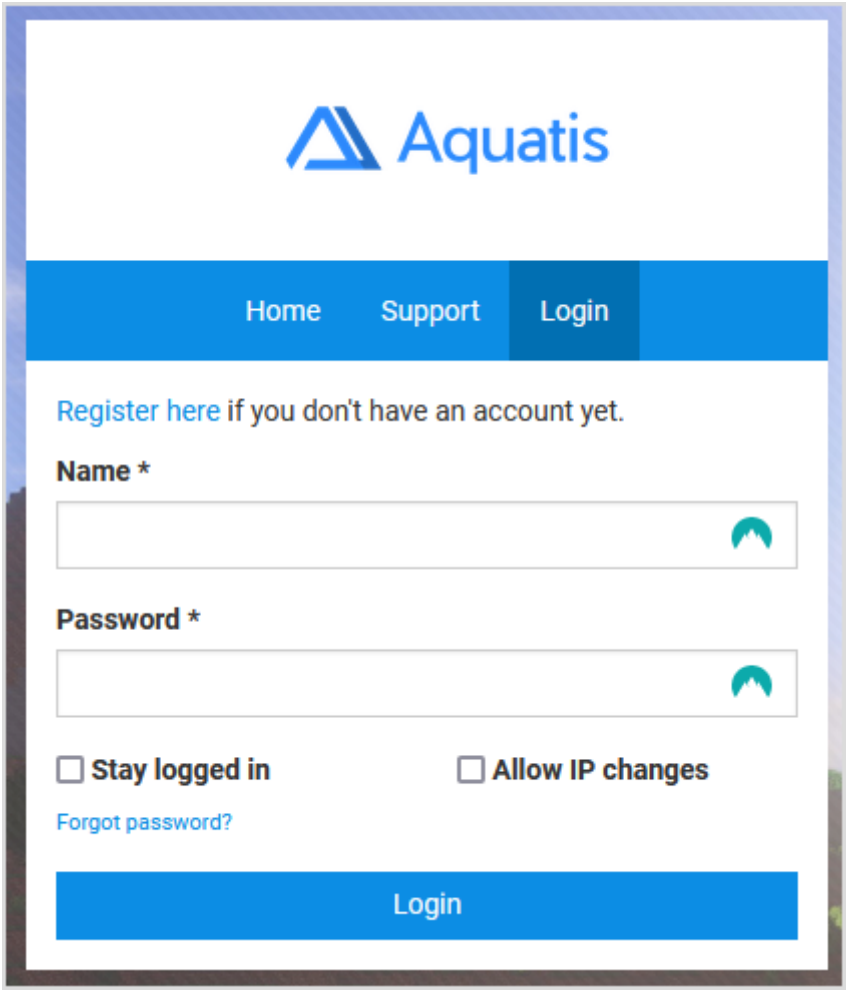

> Only share FTP information with people you trust. Aquatis will never ask for your password.

Step 1

Navigate to the Multicraft panel.

Step 2

Login to the panel with your credentials.

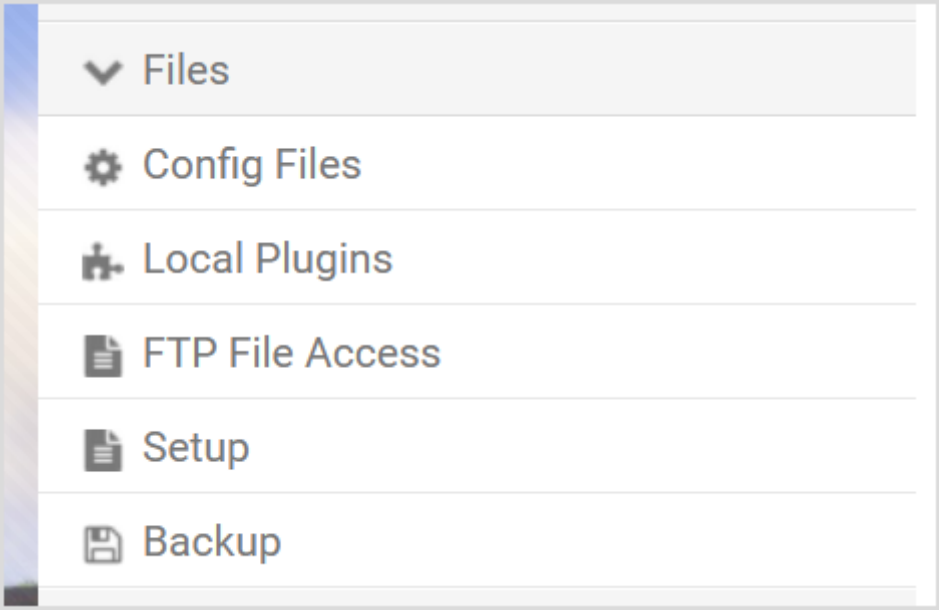

Step 3

Navigate to the server where you want to get the FTP information for.

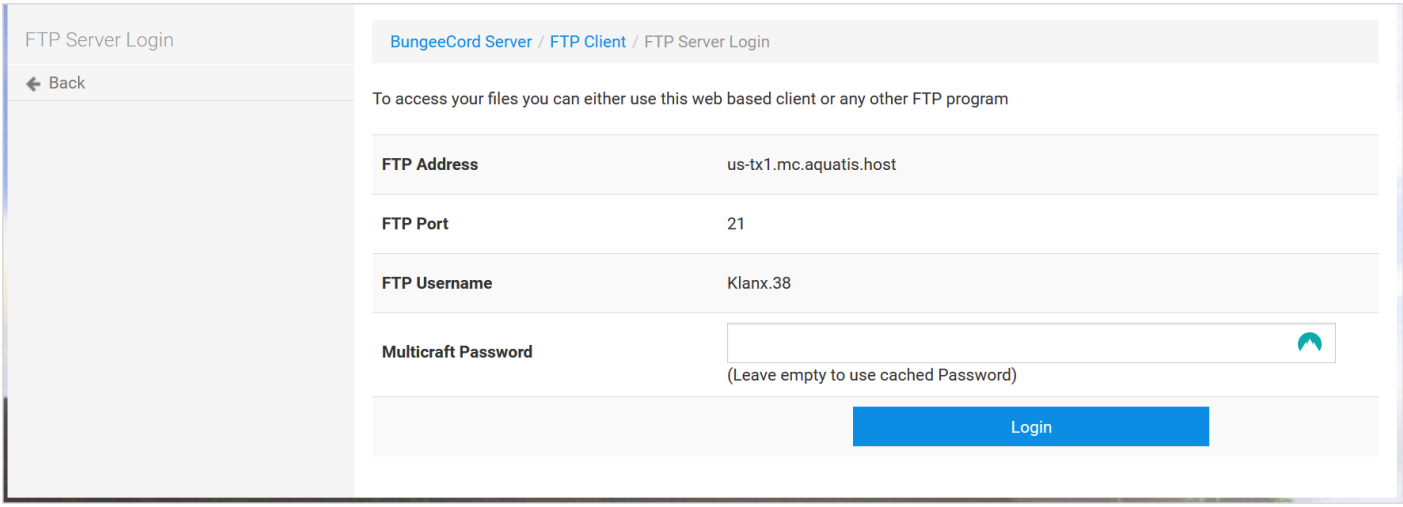

Step 4

On the menu on the side, select "**Files > FTP File Access**".

Step 5

Record the details listed on your panel. Below is an example of what it should look like.

FTP Address or FTP Host:	us-tx1.mc.aquatis.host
FTP Port:	21
FTP Username	Klanx.38

FTP Password	*The password you used to sign in to multicraft.*

> The username normally consists of the username of the user accessing the account and the server ID at the end. So in this example, the Username of the user is Klanx and the server ID is server 38. So the FTP account username would be Klanx.38!
