

# How do I find my Minecraft Servers FTP information?

This guide will show you how to access your FTP information for third-party applications like Filezilla.

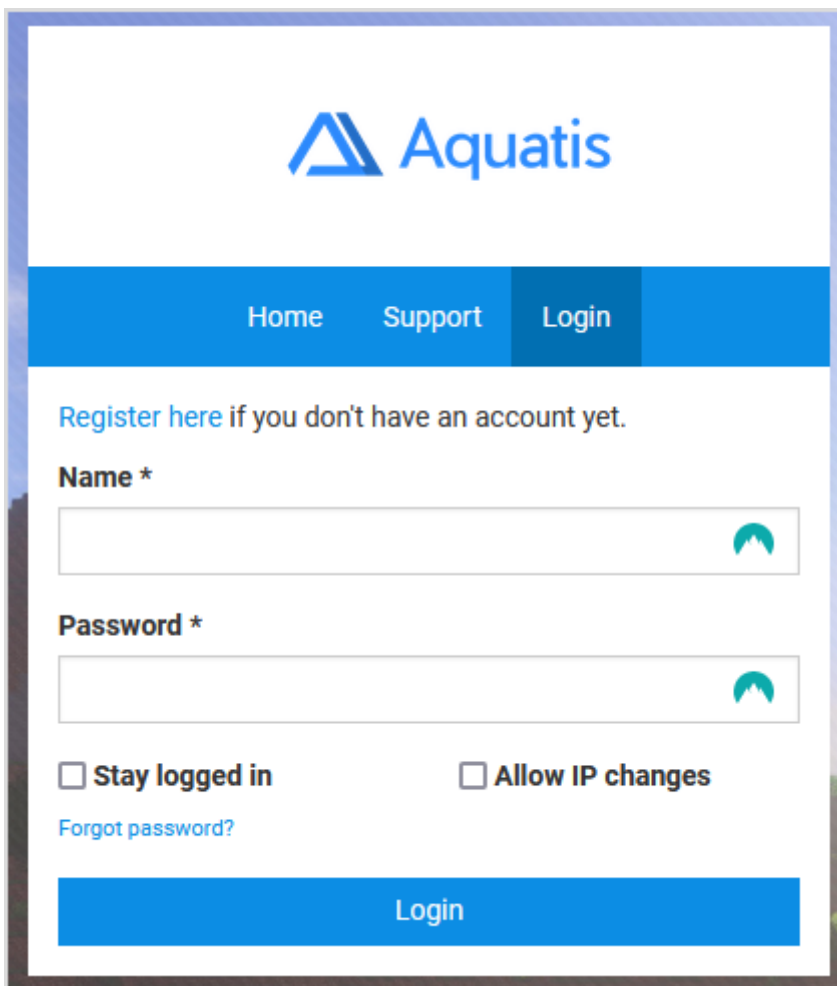

Only share FTP information with people you trust. Aquatis will never ask for your password.

## Step 1

**Navigate** to the [Multicraft](#) panel.

## Step 2

**Login** to the panel with your credentials.

The screenshot shows the Aquatis login interface. At the top, the Aquatis logo is displayed. Below the logo is a navigation bar with three tabs: 'Home', 'Support', and 'Login'. The 'Login' tab is currently selected. Below the navigation bar, there is a link that says 'Register here if you don't have an account yet.' Below this link are two input fields: 'Name \*' and 'Password \*'. Each input field has a small green icon of a mountain range on the right side. Below the input fields are two checkboxes: 'Stay logged in' and 'Allow IP changes'. Below the checkboxes is a link that says 'Forgot password?'. At the bottom of the form is a blue button labeled 'Login'.

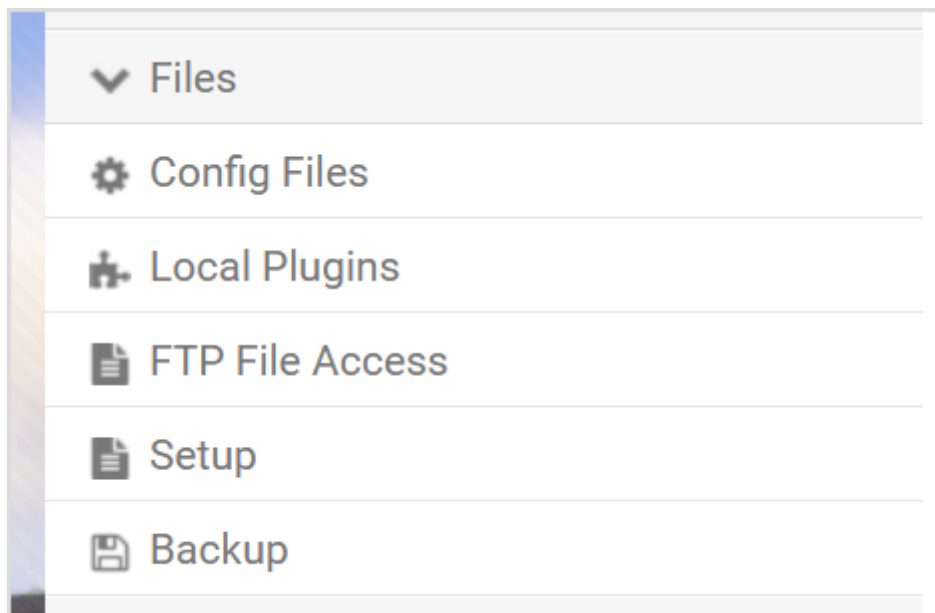

## Step 3

Navigate to the server where you want to get the FTP information for.

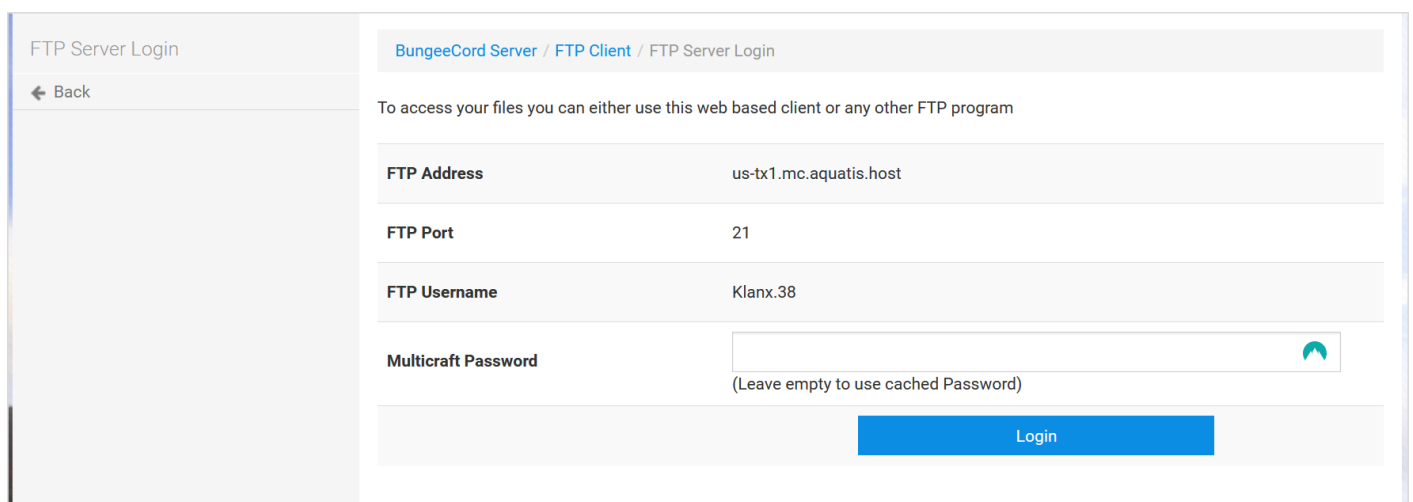

## Step 4

On the menu on the side, select "**Files > FTP File Access**".

## Step 5

**Record** the details listed on your panel. Below is an example of what it should look like.

<b>FTP Address or FTP Host:</b>	us-tx1.mc.aquatis.host
<b>FTP Port:</b>	21
<b>FTP Username</b>	Klanx.38

**FTP Password**

*The password you used to sign in to minecraft.*

The username normally consists of the username of the user accessing the account and the server ID at the end. So in this example, the Username of the user is Klanx and the server ID is server 38. So the FTP account username would be Klanx.38!
