

# How do I find my Multicraft Servers ID?

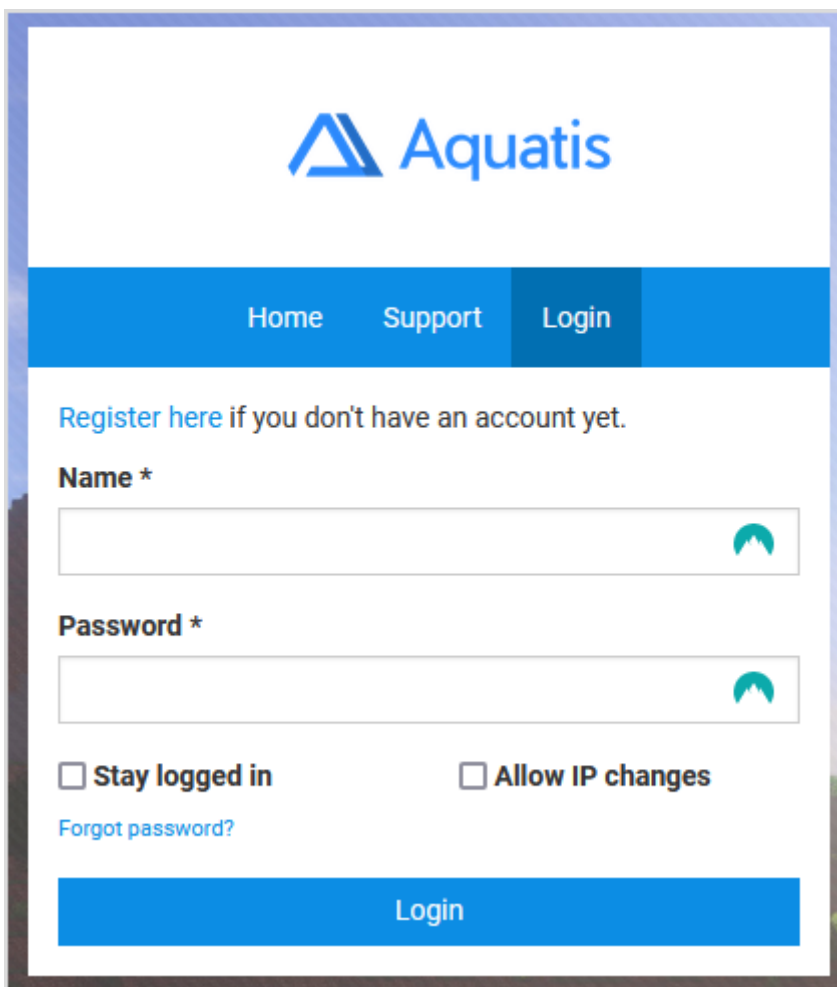

This guide will show you how to locate your Multicraft Server ID. Each server that is hosted under us has a specific number assigned to it that we refer to as an ID. This allows us to identify the server whenever we are troubleshooting.

## Step 1

**Navigate** to the [Multicraft](#) panel.

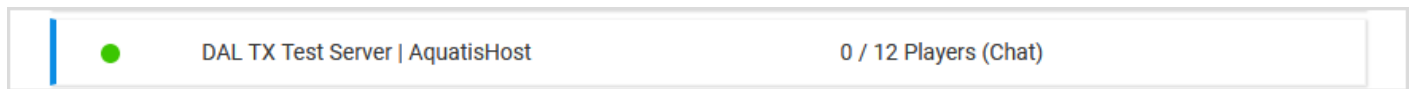

## Step 2

**Login** to the panel with your credentials.

A screenshot of the Aquatis login page. At the top center is the Aquatis logo, which consists of a blue triangle icon followed by the word "Aquatis" in a blue sans-serif font. Below the logo is a horizontal navigation bar with three items: "Home", "Support", and "Login". The "Login" item is highlighted with a darker blue background. Underneath the navigation bar, there is a line of text: "Register here if you don't have an account yet." Below this text are two input fields. The first is labeled "Name \*" and the second is labeled "Password \*". Both fields have a small green mountain icon on the right side. Below the password field are two checkboxes: "Stay logged in" and "Allow IP changes". Below the checkboxes is a link that says "Forgot password?". At the bottom of the form is a large blue button with the word "Login" in white text.

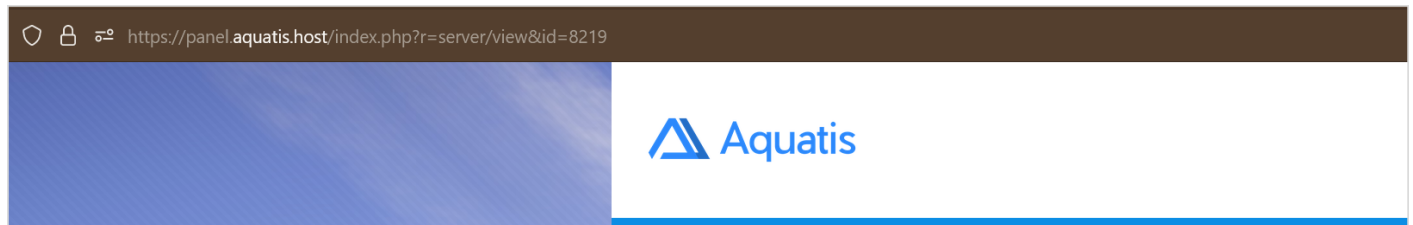

## Step 3

Navigate to the server where you want to get the server ID for.

## Step 4

On the top of the address bar, you should see your server Id at the end of the link.

The number at the end of the link identifies your server ID which for this server is 8219.
