How do I re-install my Operating System for my VPS?

Step 1

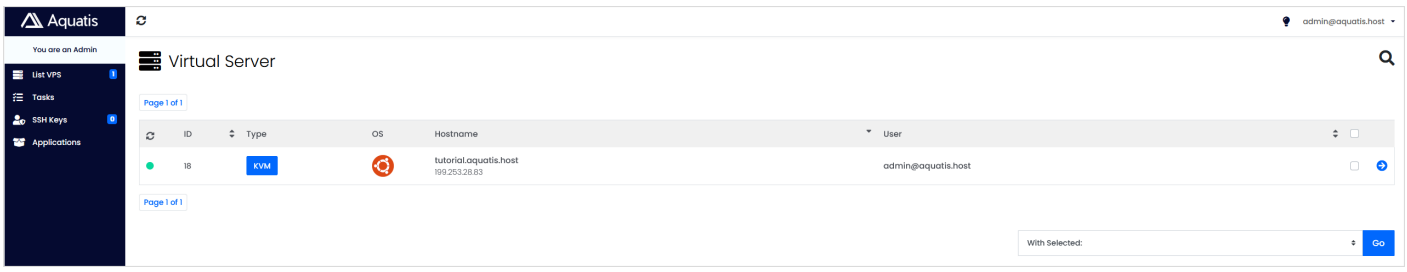

Sign in to the VPS panel.

VPS Panel: https://vps.aquatis.host:4083/

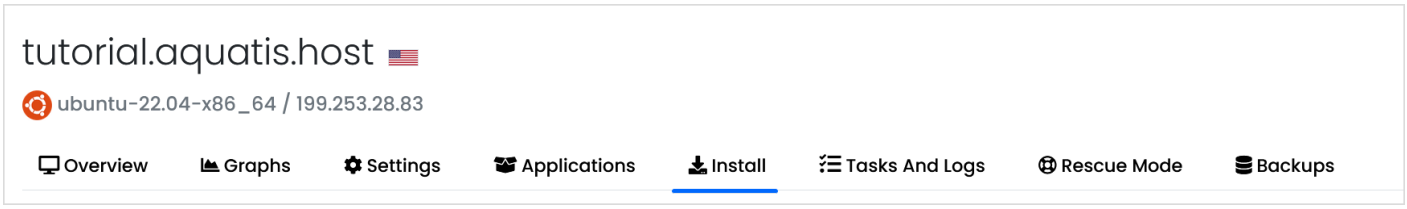

Step 2

Select the **VPS** you wish to control.

Step 3

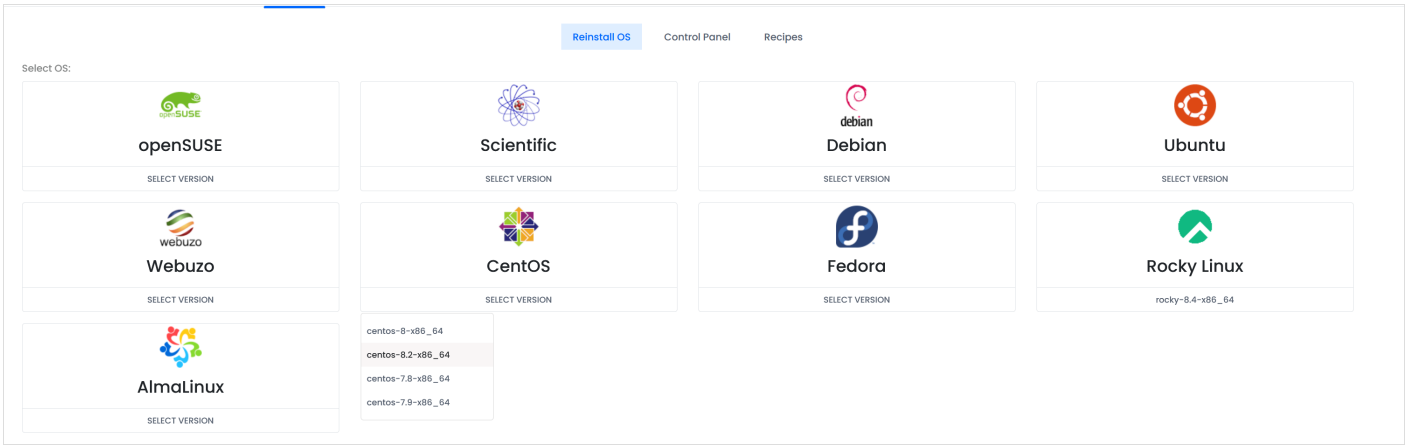

On the navigation bar, select the **Install** button to view the Operating Systems available to re-install.

Step 4

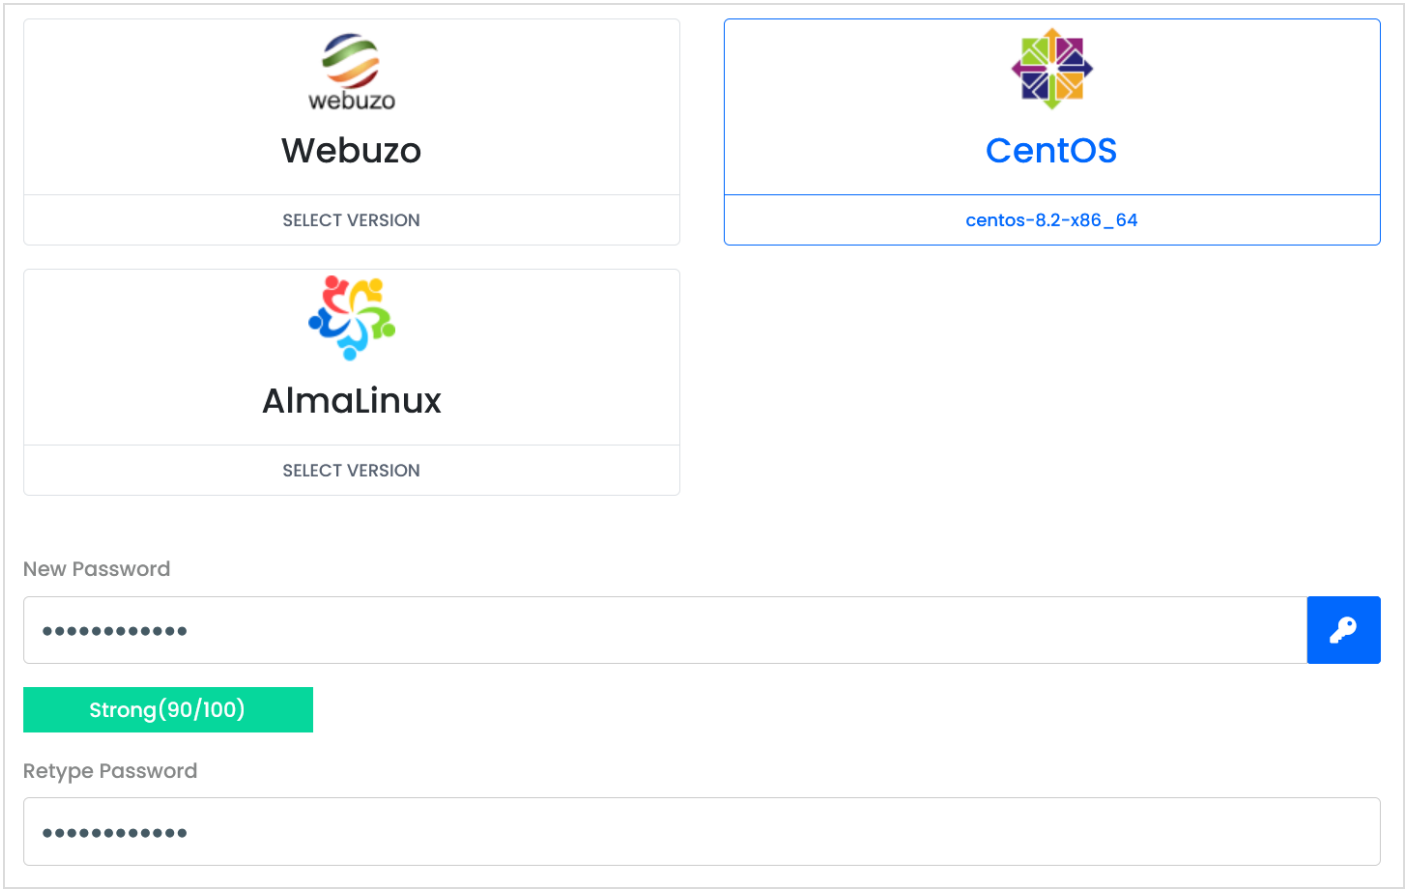

Select the **Operating System** that you wish to re-install.

> If you want to delete all the files of your VPS and start with a clean slate, you can select the **same** operating system currently installed on your VPS.

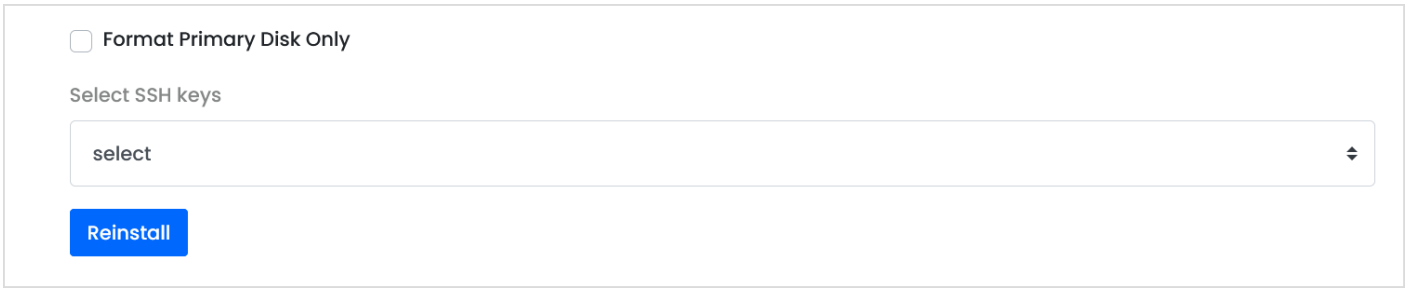

Step 5

Type in a **new** password below and retype it as well to confirm it.

Step 6

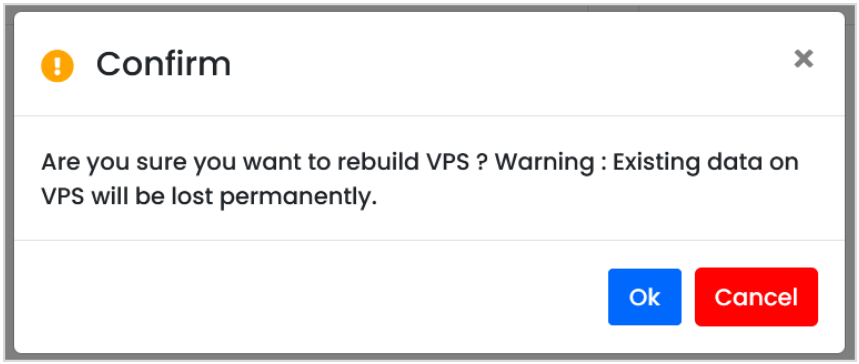

Ignore the Format Primary Disk Only option, If you wish to select SSH keys for the VPS you can re-add them. **Select** Re-install to initiate the VPS re-install.

Step 7

Confirm that you wish to re-install the VPS operating system.

> Once you select ok, the data is **lost permanently**. Please ensure you keep a backup of your VPS contents.

Step 8

Wait as the VPS re-installs the operating system. Once complete, the server will boot back online.
