

How do I view the backups of my VPS?

VPS Backups are currently only provided with High Ram KVM VPSs.

Step 1

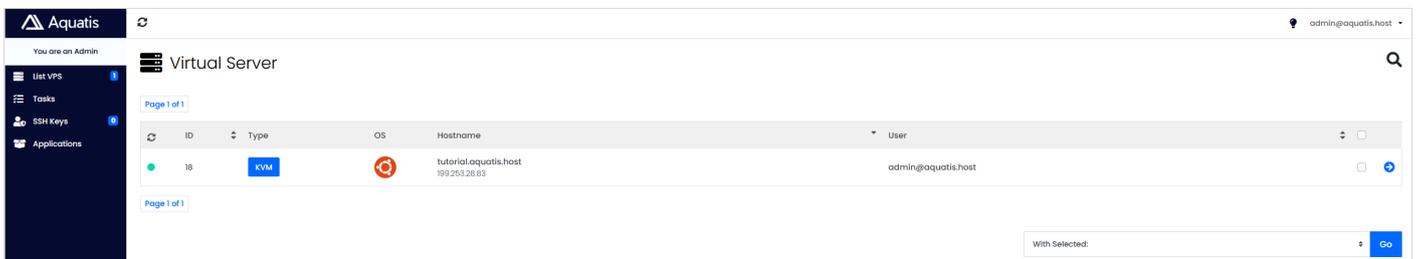

Sign in to the VPS panel.

VPS Panel: <https://vps.aquatis.host:4083/>

Step 2

Select the **VPS** you wish to control.

Step 3

On the navigation bar, select the **Backups** button to view the VPS backups.

Listed below will be the backups currently stored. This will show you all of the options currently available to you.

Backups list of VPS ID: 18
The dates for which backups of this VPS are available are listed below. You can restore or delete them accordingly.

Show Entries Search:

Backup Date	Action
2022-09-17 03:49:09	↺ 🗑️

Showing 1 to 1 of 1 Entries Previous **1** Next

Monthly Backups Used: 1 / ∞
Monthly Restores Used: 0 / ∞
Current Cycle: 01-09-2022 to 30-09-2022

[Backup Now](#)

Listed in the table will be all the backups that are currently stored. Below are two actions.

Backup Date	Action
2022-09-17 03:49:09	↺ 🗑️

Action	Action Definition
Restore	Selecting this will restore this backup to the VPS. This will delete data on the VPS.
Delete	This will delete the backup from the system, doing this will be unrecoverable.

Step 4

To create a manual backup, **select** "Backup Now" to manually backup your VPS.

Monthly Backups Used: 1 / ∞
Monthly Restores Used: 0 / ∞
Current Cycle: 01-09-2022 to 30-09-2022
