

How do I view the IP Address of my VPS?

Step 1

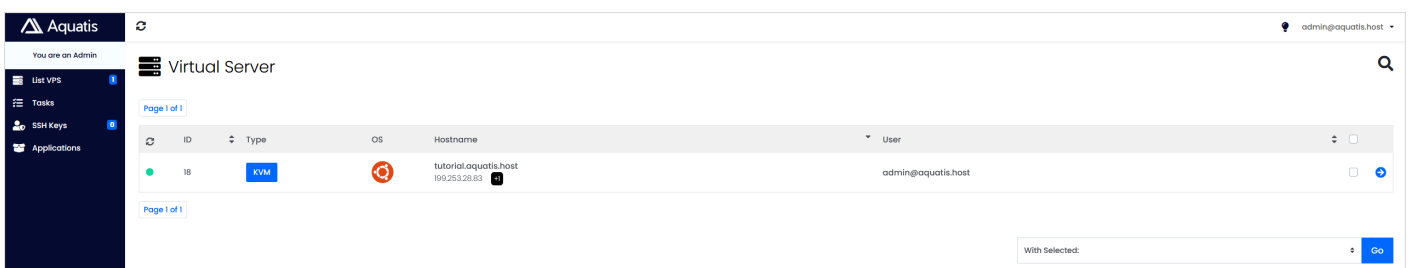

Sign in to the VPS panel.

VPS Panel: <https://vps.aquatis.host:4083/>

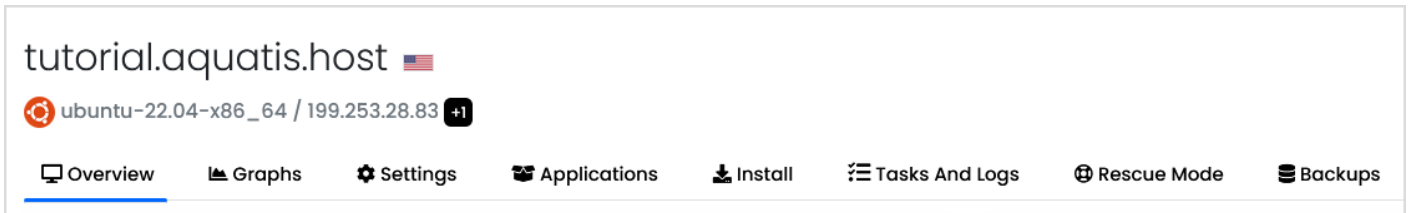

Step 2

Select the **VPS** you wish to view the IP settings for.

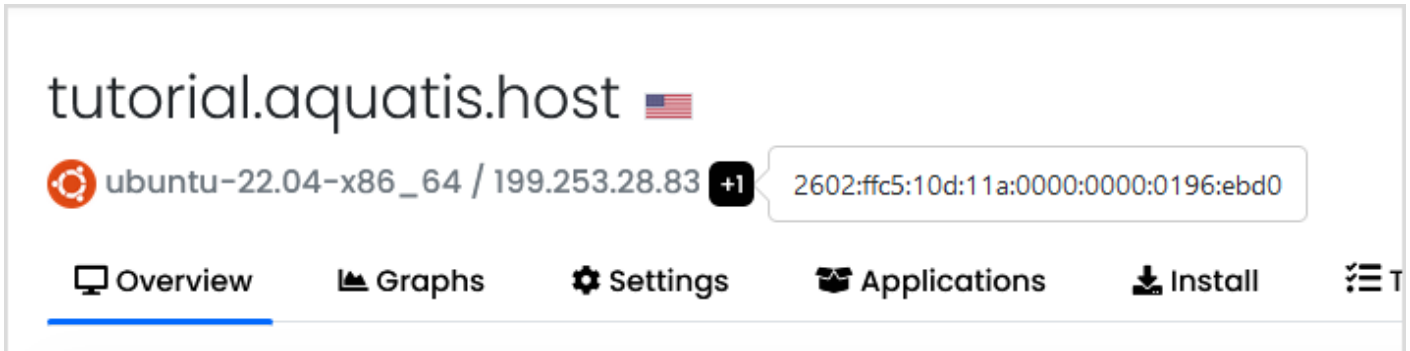

Step 3

Under the hostname will be your **IPv4 Address** that is assigned to your VPS.

To view the **IPv6 Address**, hover the mouse over the black box next to the IPv4 address to see additional addresses assigned to your VPS.

That's it! You now fully know how to view your VPS server's IPv4/IPv6 Address.
